

## Pacific Rundum awarded S Class accreditation under Act on the Rational Use of Energy Business Evaluation Scheme for six consecutive years

Pacific Rundum Co., Ltd. (based in Toyama; President and CEO Shinichiro Susukida) has been granted S Class accreditation under the Business Evaluation Scheme for the Act on the Rational Use of Energy. The scheme, administered by the Agency of Natural Resources and Energy (part of the Ministry of Economy, Trade and Industry), was set up to acknowledge outstanding examples of energy-saving initiatives by businesses with respect to specific targets. The S Class accreditation, announced in the Agency's FY2023 report, is based on our energy-saving initiatives in FY2022. The accreditation is **valid for a six-year period** beginning FY2018. Pacific Rundum is honored to have been recognized as S Class and remains committed to pursuing further efforts to reduce our energy consumption in the future.

Standard industry classification / sub-classification <small>NB: Evaluations are based on energy usage monitoring at selected enterprises (including factories and office facilities), and as such may not reflect energy usage across all industry types.</small>	Designated Business No.	Main location	Business Name	Energy-saving evaluation				S class field based on benchmark achievement in FY2023

Pacific Rundum Co., Ltd. is committed to reducing greenhouse gas emissions and achieving carbon neutrality via a range of energy-saving initiatives such as using renewable energy to power our factories and installing low-energy machinery and equipment. Our organization is united in wanting to help preserve the global environment in line with the slogan, **“Let’s make our planet comfortable with everyone’s actions,”** driven by our conviction that global environmental conservation is one the most critical issues for all humankind.

## Examples of our initiatives / Mega-solar construction

A 900kW solar power plant (mega-solar) is currently under construction in the southeastern part of the factory grounds, and is scheduled to be completed at the end of 2024. With the completion of this facility, all solar power generation facilities on the factory grounds will be able to generate 1 MW of electricity.
